PROJECTS

Graduation Project
IA website was made using Django to analyze stocks with Machine Learning.

Certificate Verification Application
Certificate verification application was made using blockchain technology.

Mips Simulator
32bit and 16bit MIPS simulator was made. Later, the Verilog codes of this application were written.

At this time I am making projects using React.

EDUCATION HISTORY

Konya Food and Agriculture University
Bachelor of Science in Computer Engineering (CGPA: 2.53 / 4.00).
Year of Graduation: 2023

SKILLS AND ABILITIES

Python, Kotlin, JavaScript, HTML and CSS
SQL
English (B2 level), German (A1 Level)

HOBBIES

As a computer engineer, I like to follow the developments in programming languages. I am trying to run a project that I have made in other programming languages. I want to have information about every subject by taking courses from sub-branches of computer engineering such as cyber security, python and Unity from online education sites. I love hanging out with my friends and playing football. I read at least 2 books a month. These books are usually philosophy, history or Turkish classics. I am trying to learn German on my own.
